

METAL ZINC

Protective zinc spray

METAL ZINC is an aerosol protectant for metal surfaces, comprising micronised zinc metal powder dispersion in special resins. The product was designed for professional retouching work on electrolytically galvanised or hot-dip galvanised surfaces and objects.

WHY

METAL ZINC is the retouching product with the highest content of zinc metal powder – micronised zinc, the finest and most efficient form of this metal – on the market today.

METAL ZINC is not a spray paint: this would be a gross oversimplification of the product's true nature. A paint is a compound in which a coloured pigment is added to a resin, of which there are various types. METAL ZINC, on the other hand, is a combination of resin and zinc metal powder at a purity exceeding 98%. For this reason, it should be considered as a **professional retouching** product.

These are its principal characteristics

It has a bright finish, in practice identical to the finish produced by galvanisation. It forms a strong, elastic coating, capable of withstanding temperatures of at least 300°C.

Over time, the retouched area gradually becomes matt, in exactly the same way as electrolytic galvanisation and/or hot-dip galvanisation. The retouch therefore always remains invisible.

Two light coats of METAL ZINC provide excellent protection from atmospheric agents, preventing rust and oxidation. It can also be used successfully in a marine environment.

HOW

Shake the can until the beads can be heard moving, continue shaking for at least a minute, then apply from a distance of about 20 cm, making sure that the surface treated is clean and dry. Once the first coat has dried (about 2 minutes), repeat the treatment, applying a second coat. This is essential to obtain the correct protective effect. After finishing retouching operations, put the can away after having cleaned the application nozzle.

WHERE

- Metalworking
- Heating and air conditioning
- Building contractors
- Prefabricated building components
- Shipyards
- Electrical household appliance repair
- Coffee machine maintenance
- Beverage vending machine repair
- Repair operatives in general

PACKAGING

Product code

917.003

Size

400 ml aerosol can

Package

Box with 12 cans
